

Cadrenal Therapeutics to Present at the Emerging Growth Conference on July 18, 2024

PONTE VEDRA, Fla., July 17, 2024 /PRNewswire/ — **Cadrenal Therapeutics, Inc.**, (Nasdaq: CVKD), a biopharmaceutical company developing tecarfarin, a late-stage, new-generation Vitamin K Antagonist (VKA) oral and reversible anticoagulant (blood thinner) designed to prevent heart attacks, strokes, and deaths due to blood clots in patients with rare cardiovascular conditions, today announced that the Company will be participating in the next Emerging Growth Conference, a virtual forum for institutional and retail investment community engagement.

Cadrenal's presentation will be on Thursday, July 18, 2024, at 4:15 pm ET. A webcast link of the presentation can be found on the investor relations page of the Company's website or accessed here.

If interested investors are not able to join the live event, an archived webcast will be available on www.EmergingGrowth.com and the Emerging Growth YouTube Channel, <http://www.YouTube.com/EmergingGrowthConference>.

Management will also host one-on-one investor meetings after the Conference. To request a virtual one-on-one meeting with the Company's management team, please contact your Emerging Growth Conference representative or email the Company's investor relations team at CVKD@LythamPartners.com.

ABOUT CADRENAL THERAPEUTICS, INC.

Cadrenal Therapeutics is developing tecarfarin for unmet needs in anticoagulation therapy. Tecarfarin is a new-generation Vitamin K Antagonist (VKA) oral and reversible anticoagulant (blood thinner) to prevent heart attacks, strokes, and deaths due to blood clots in patients with rare cardiovascular conditions who require lifelong anticoagulation. Tecarfarin has orphan drug designation from the FDA for the prevention of thrombosis and thromboembolism (blood clots) in patients with an implanted mechanical circulatory support device, which includes the left ventricular assist device (LVAD). Tecarfarin also has orphan drug and fast-track designations from the FDA for the prevention of systemic thromboembolism of cardiac origin in patients with end-stage kidney disease (ESKD) and atrial fibrillation (AFib). Tecarfarin is specifically designed to use a different metabolism

pathway than the oldest and most commonly prescribed VKA warfarin. Tecarfarin has been evaluated in eleven (11) human clinical trials and more than 1,000 individuals. In Phase 1, Phase 2, and Phase 2/3 clinical trials, tecarfarin has generally been well-tolerated in both healthy adult subjects and patients with chronic kidney disease.
