IRADIMED CORPORATION Named a 2024 Most Successful Small-Cap Company in America by Forbes

WINTER SPRING, Fla., Nov. 30, 2023 — IRADIMED CORPORATION (the "Company") (NASDAQ: IRMD) was recently named on Forbes' latest list of America's Most Successful Small-Cap Companies for 2024. Iradimed is a leader in the development of innovative magnetic resonance imaging ("MRI") medical devices and the only provider of a non-magnetic intravenous ("IV") infusion pump system, and non-magnetic patient vital signs monitoring systems that are designed for use during MRI procedures.

To help investors find 100 "diamonds in the rough," Forbes used data from FactSet to compile its annual list of America's Most Successful Small-Cap Companies. Forbes screened nearly 1,000 companies with a market value between $300 million and $2 billion to find 389 companies with positive sales growth over the past 12 months and a share price of at least $5. Financial institutions, REITs, utilities, royalty trusts, and limited partnerships were excluded, as were companies that had been public for less than one year. The stocks were ranked based on earnings growth, sales growth, return on equity, and total stock return for the latest 12 months available and over the last five years. Forbes gave more weight to the latest year's data in the ranking. All data was as of November 3, 2023.

"Climbing the ranks of Forbes' prestigious list of the top 100 of America's Most Successful Small-Cap Companies for 2024 is an inspiring milestone for us," said Roger Susi, President and Chief Executive Officer of the Company. "This achievement is a tribute to our exceptional team's hard work, expertise, and unwavering commitment. We are immensely grateful for the trust of our shareholders and remain focused on driving forward and leveraging our strengths to create meaningful impact and sustained success."

About IRADIMED CORPORATION

IRADIMED CORPORATION is a leader in developing innovative Magnetic Resonance Imaging ("MRI") compatible medical devices. We design, manufacture, market, and distribute MRI-compatible medical devices, accessories, disposables, and related services.

We are the only known provider of a non-magnetic intravenous ("IV") infusion pump system specifically designed to be safe for use during MRI procedures. We were the first to develop

an infusion delivery system that largely eliminates many dangers and problems during MRI procedures. Standard infusion pumps contain magnetic and electronic components that can create radio frequency interference and are dangerous to operate in the presence of the powerful magnet that drives an MRI system. Our patented MRidium® MRI compatible IV infusion pump system has a non-magnetic ultrasonic motor, uniquely designed non-ferrous parts, and other special features to safely and predictably deliver anesthesia and other IV fluids during various MRI procedures. Our pump solution provides a seamless approach that enables accurate, safe, and dependable fluid delivery before, during, and after an MRI scan, which is important to critically ill patients who cannot be removed from their vital medications and children and infants who must generally be sedated to remain immobile during an MRI scan.

Our 3880 MRI-compatible patient vital signs monitoring system has been designed with non-magnetic components and other special features to safely and accurately monitor a patient's vital signs during various MRI procedures. The Iradimed 3880 system operates dependably in magnetic fields up to 30,000 gauss, which means it can operate virtually anywhere in the MRI scanner room. The Iradimed 3880 has a compact, lightweight design, allowing it to travel with the patient from their critical care unit to the MRI and back, resulting in increased patient safety through uninterrupted vital signs monitoring and decreasing the amount of time critically ill patients are away from critical care units. The features of the Iradimed 3880 include wireless ECG with dynamic gradient filtering; wireless SpO2 using Masimo® algorithms; non-magnetic respiratory CO2; invasive and non-invasive blood pressure; patient temperature, and optional advanced multi-gas anesthetic agent unit featuring continuous Minimum Alveolar Concentration measurements. The Iradimed 3880 MRI-compatible patient vital signs monitoring system has an easy-to-use design and effectively communicates patient vital signs information to clinicians.
