IRADIMED CORPORATION to Hold 2016 Second Quarter Financial Results Conference Call on July 29th

WINTER SPRINGS, Fla., July 15, 2016 — IRADIMED CORPORATION (NASDAQ:IRMD) announced today that the Company will release its 2016 second quarter financial results before the market opens on Friday, July 29th. IRADIMED management will host a conference call the same day beginning at 11:00 a.m. Eastern Time to discuss those results and to answer questions.

Individuals interested in listening to the conference call may do so by dialing 1-844-413-1781 for domestic callers, or 1-716-247-5767 for international callers, and entering reservation code 50949035.

The conference call will also be available real-time via the Internet at www.iradimed.com/en-us/investors/index.php and selecting Events & Presentations. A recording of the call will be available on the Company's website for 90 days following completion of the call.

About IRADIMED CORPORATION

IRADIMED CORPORATION is the only known provider of non-magnetic intravenous (IV) infusion pump systems that are specifically designed to be safe for use during magnetic resonance imaging (MRI) procedures. We were the first to develop an infusion delivery system that largely eliminates many of the dangers and problems present during MRI procedures. Standard infusion pumps contain magnetic and electronic components which can create radio frequency (RF) interference and are dangerous to operate in the presence of the powerful magnet that drives an MRI system. Our patented MRidium MRI compatible IV infusion pump system has been designed with a non-magnetic ultrasonic motor, uniquely-designed non-ferrous parts and other special features in order to safely and predictably deliver anesthesia and other IV fluids during various MRI procedures. Our pump solution provides a seamless approach that enables accurate, safe and dependable fluid delivery before, during and after an MRI scan, which is important to critically-ill patients who cannot be removed from their vital medications, and children and infants who must generally be sedated in order to remain immobile during an MRI scan.
