

## **IRADIMED CORPORATION to Present at Cantor Fitzgerald Global Healthcare Conference**

WINTER SPRINGS, Fla., Sept. 18, 2017 — IRADIMED CORPORATION (NASDAQ:IRMD), today announced that Roger Susi, President and Chief Executive Officer and Chris Scott, Chief Financial Officer, will present at the Cantor Fitzgerald Global Healthcare Conference in New York, NY. Mr. Susi and Mr. Scott are scheduled to present on Tuesday, September 26<sup>th</sup> at 3:25 pm Eastern Time.

Investors may listen to a live webcast and view a copy of the slide presentation online via the internet at <http://www.iradimed.com/en-us/investors/index.php> and selecting Events & Presentations. The recorded webcast will be accessible online for at least 30 days.

### **About IRADIMED CORPORATION**

IRADIMED CORPORATION is a leader in the development of MRI compatible medical devices. We are the only known provider of non-magnetic intravenous (IV) infusion pump systems that are specifically designed to be safe for use during magnetic resonance imaging (MRI) procedures. We were the first to develop an infusion delivery system that largely eliminates many of the dangers and problems present during MRI procedures. Standard infusion pumps contain magnetic and electronic components which can create radio frequency (RF) interference and are dangerous to operate in the presence of the powerful magnet that drives an MRI system. Our patented MRidium® MRI compatible IV infusion pump system has been designed with a non-magnetic ultrasonic motor, uniquely-designed non-ferrous parts and other special features in order to safely and predictably deliver anesthesia and other IV fluids during various MRI procedures. Our pump solution provides a seamless approach that enables accurate, safe and dependable fluid delivery before, during and after an MRI scan, which is important to critically-ill patients who cannot be removed from their vital medications, and children and infants who must generally be sedated in order to remain immobile during an MRI scan.

Our 3880 MRI compatible patient vital signs monitoring system has been designed with non-magnetic components and other special features in order to safely and accurately monitor a patient's vital signs during various MRI procedures. The IRADIMED 3880 system operates dependably in magnetic fields up to 30,000 gauss, which means it can operate virtually anywhere in the MRI scanner room, including in very close proximity to the MRI scanner bore. The IRADIMED 3880 has a compact, lightweight design allowing it to travel with the patient from their critical care unit, to the MRI and back, resulting in increased patient safety through uninterrupted vital signs monitoring and decreasing the amount of time critically ill patients are away from critical care units. The features of the IRADIMED 3880 include: wireless ECG with dynamic gradient filtering; wireless SpO2 using Masimo® algorithms; non-magnetic

respiratory CO2; non-invasive blood pressure; patient temperature, and; optional advanced multi-gas anesthetic agent unit featuring continuous Minimum Alveolar Concentration measurements. The IRADIMED 3880 MRI compatible patient vital signs monitoring system has an easy-to-use design and allows for the effective communication of patient vital signs information to clinicians. Our 3880 MRI compatible patient vital signs monitoring system is currently available to international customers. Once we receive FDA 510(k) clearance, the 3880 will be available to U.S. customers. We currently anticipate commencing marketing the 3880 to U.S. customers in the fourth quarter of 2017.
