

SenesTech Launches Second Manufacturing Line in Flagstaff to Ensure Uninterrupted Demand

FLAGSTAFF, Ariz., June 13, 2017 — SenesTech, Inc. (NASDAQ: SNES), a developer of proprietary technologies for managing animal pest populations through fertility control, announced today that in an effort to ensure that the Company can meet the rapidly increasing demand for their innovative new rodent control technology, ContraPest, it has launched its second manufacturing line in Flagstaff. With the addition of this second line, the Company's existing manufacturing capacity is expected to more than double.

“We continue to learn and improve, and have incorporated that knowledge into this second line. We are confident that we will be able to handle the anticipated increase in demand,” said Elissa Calloway, Vice President of Manufacturing at SenesTech.

In order to utilize both manufacturing lines, SenesTech has added additional staff in both manufacturing and quality control.

“Delighting our customers is our primary focus. Our increased capacity insures timely and uninterrupted delivery of ContraPest,” said Andrew Altman, Chief Operating Officer.

About SenesTech

SenesTech has developed an innovative technology for managing animal pest populations through fertility control as opposed to a lethal approach.

The Company's first fertility control product, ContraPest[®], is marketed for use in controlling rat infestations. ContraPest's novel technology and approach targets the reproductive capabilities of both sexes, inducing egg loss in female rodents and impairing sperm development in males. Using proprietary bait stations, ContraPest is dispensed in a highly palatable liquid formulation that promotes sustained consumption by rodent communities. ContraPest is designed, formulated and dispensed to be safe for handlers and non-target species such as wildlife, livestock and pets, in a biodegradable product. In contrast, the historical approach to managing rodent pest populations, rodenticides, carries a high risk of environmental contamination and the poisoning of non-target animals, pets and children.

We believe our non-lethal approach, targeting reproduction, is more humane, less harmful to the environment, and more effective in providing a sustainable solution to pest infestations than traditional lethal pest management methods. There is currently no other non-lethal fertility control product approved by the Food and Drug Administration (FDA), or the Environmental Protection Agency (EPA), for the management of rodent populations. We believe ContraPest® will establish a new paradigm in rodent control, resulting in improved performance in rodent control over rodenticides, without the negative environmental effects of rodenticides.
